Standard Courier Service

Determining Air Shipping Rates

When shipping via air services, couriers require that the shipping weight be determined by the greater of the actual weight of the boxed product or its dimensional shipping weight. The formula for calculating dimensional shipping weight is as follows: L x W x H/194 for domestic air shipments and L x W x H/166 for international air shipments. RLWS takes the added precaution of double boxing some of our products. This may result in dimensional weight charges by the carrier when shipping by air. Even with this added precaution, we suggest that you always ship high precision and fragile products via air service.

Federal Express (FedEx)
